Sales Performance & Business Insights

Data period: 01 Jan 2023 – 30 Jun 2023

A data-led overview of revenue, products, locations and customer trading patterns

Prepared from the supplied transaction dataset

Executive Summary

Snapshot of the supplied coffee shop transaction data

TOTAL REVENUE	UNITS SOLD	RECORDED SALES	AVG. REVENUE / SALE
$698,812.33	214,470	149,116	$4.69

Largest category by revenue: Coffee (269,952.45 revenue).

Highest-revenue store in this dataset: Hell's Kitchen (236,511.17 revenue).

Highest-revenue time classification: 01. Morning.

Use the following slides to identify where sales concentrate and where operational tests may be worthwhile.

Data Overview

What is included in the source dataset

148,702 rows and 15 columns in the supplied CSV.

Transaction dates span 01 Jan 2023 to 30 Jun 2023.

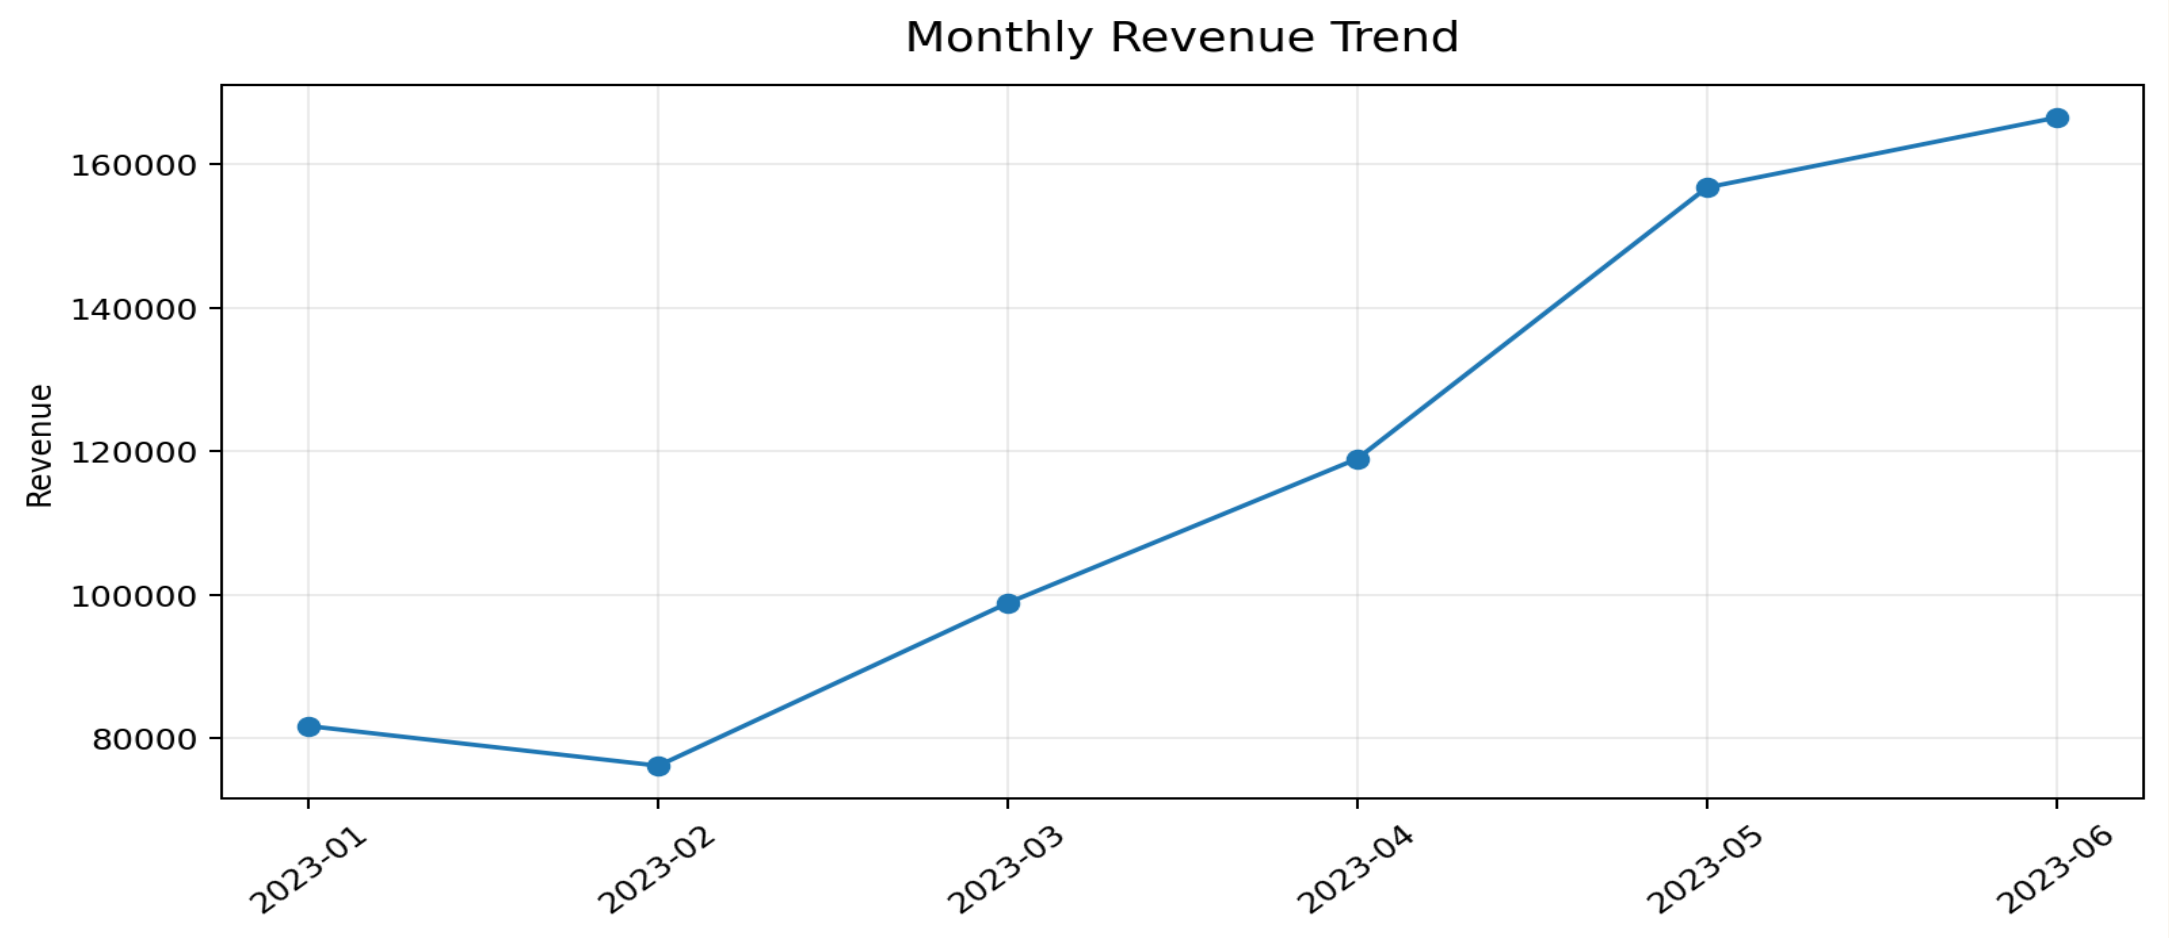

Sales dimensions include product detail, product type, product category and store location.

Time dimensions include transaction time, day name, month name, weekday/weekend classification and time-of-day classification.

Measures include revenue, units sold, number of sales, unique products and number of stores.

Revenue Over Time

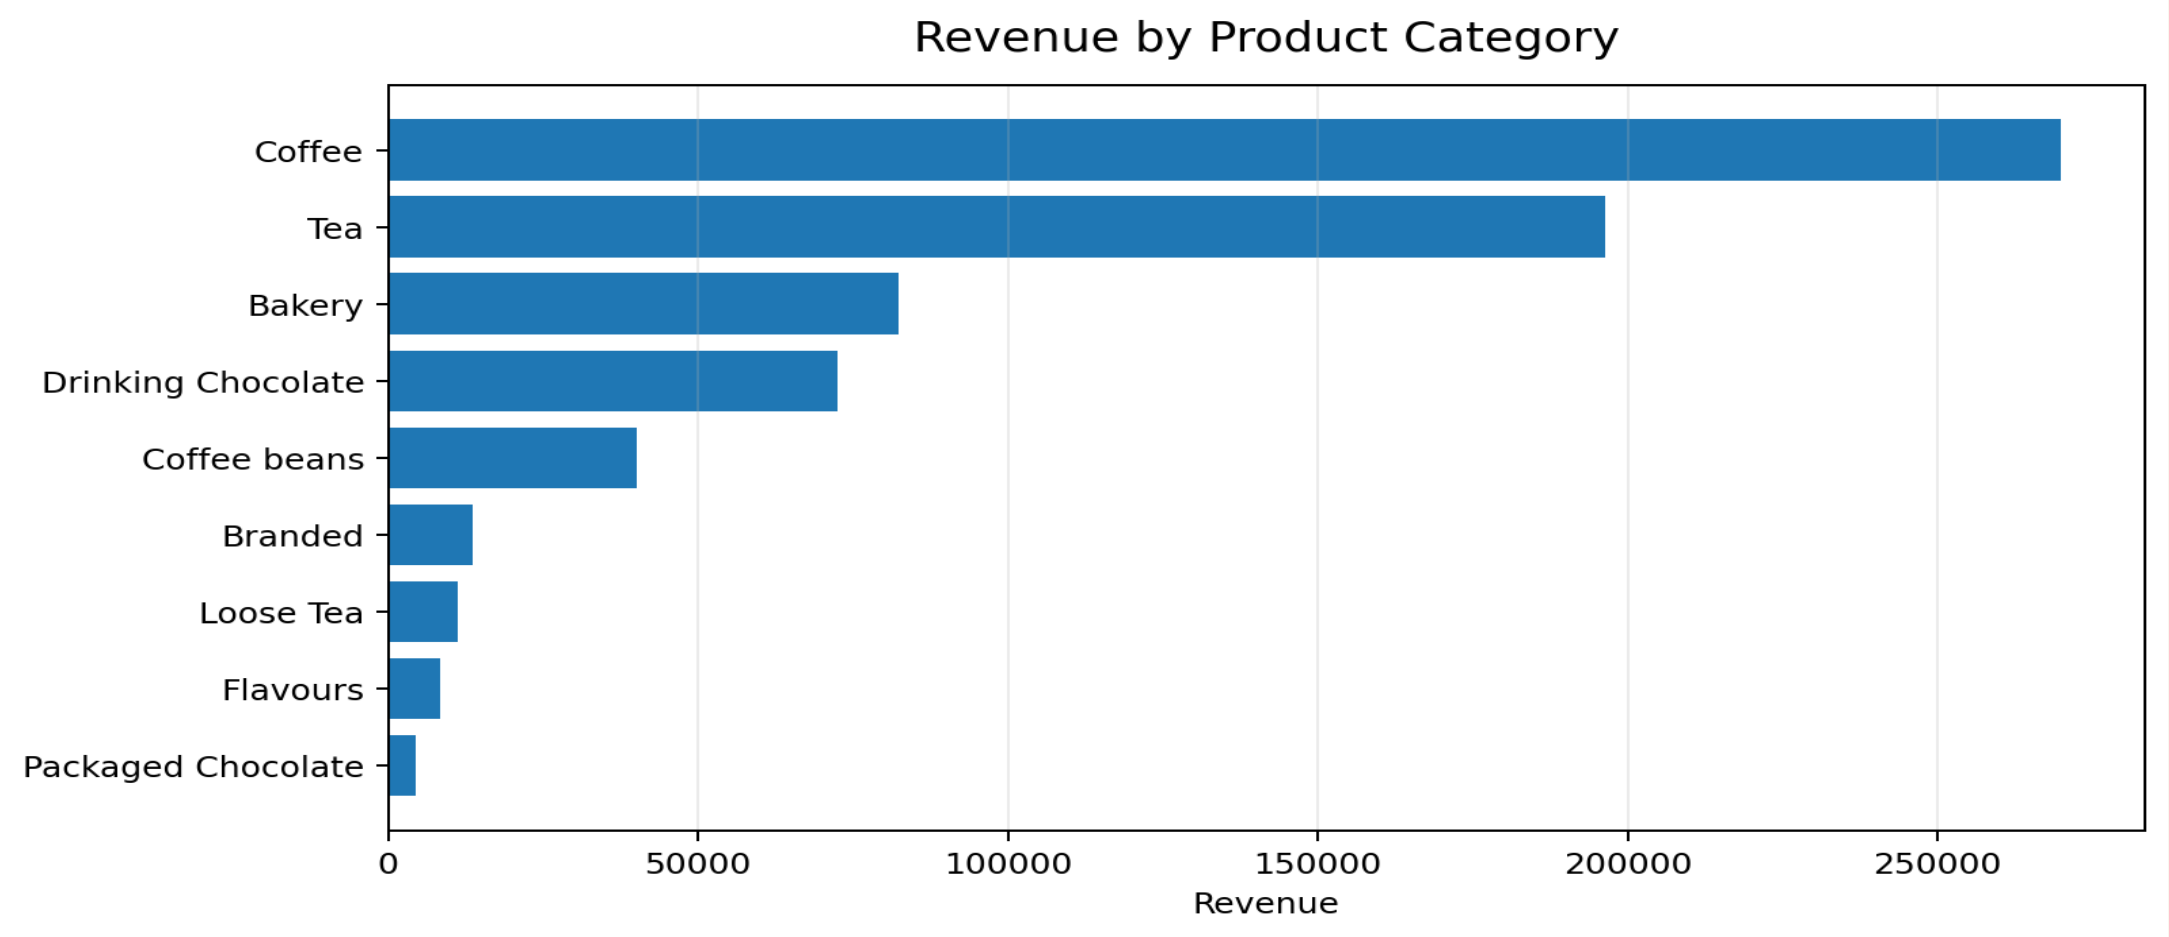

Monthly revenue helps show seasonality and changes in trading performance.

Interpret month-to-month movement alongside promotions, trading hours, holidays and store-level changes.

Revenue by Product Category

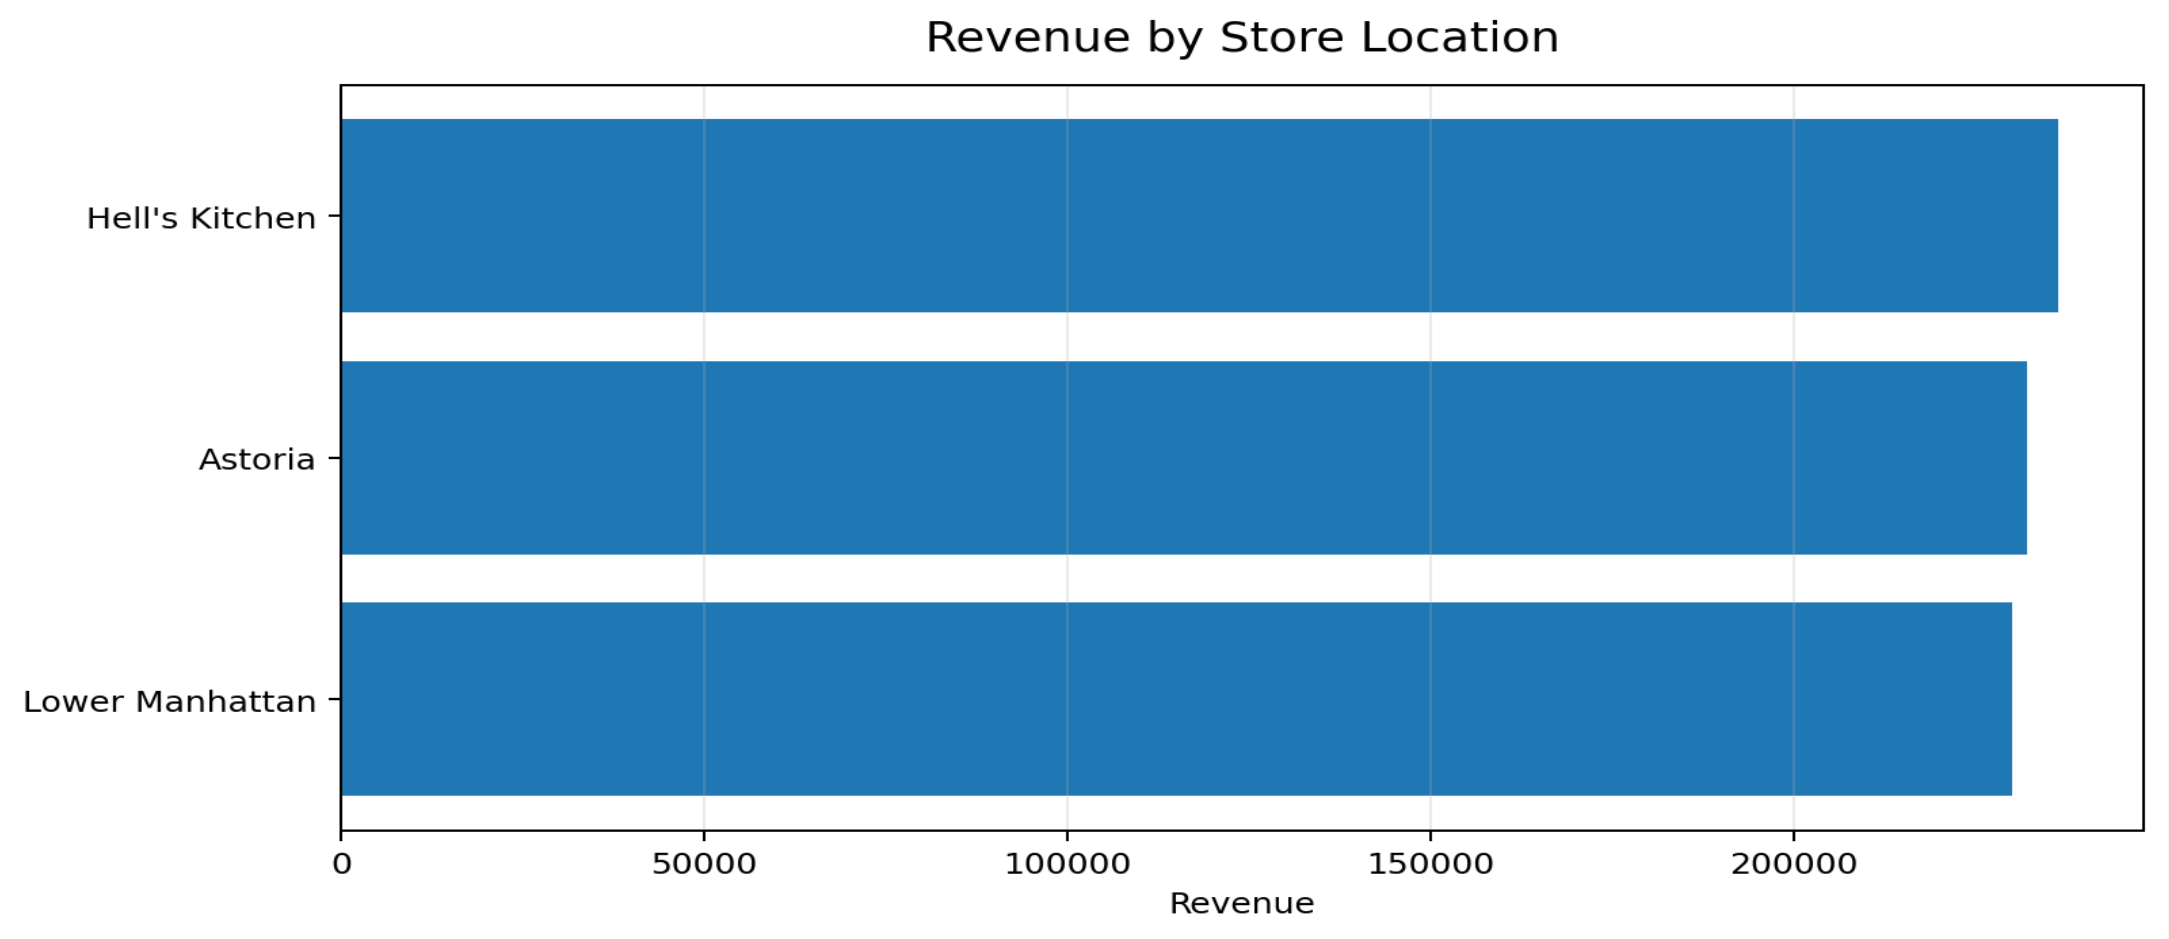

Compare category contribution to understand the sales mix.

Coffee is the leading category by revenue, contributing approximately 38.6% of recorded revenue.

Revenue by Store Location

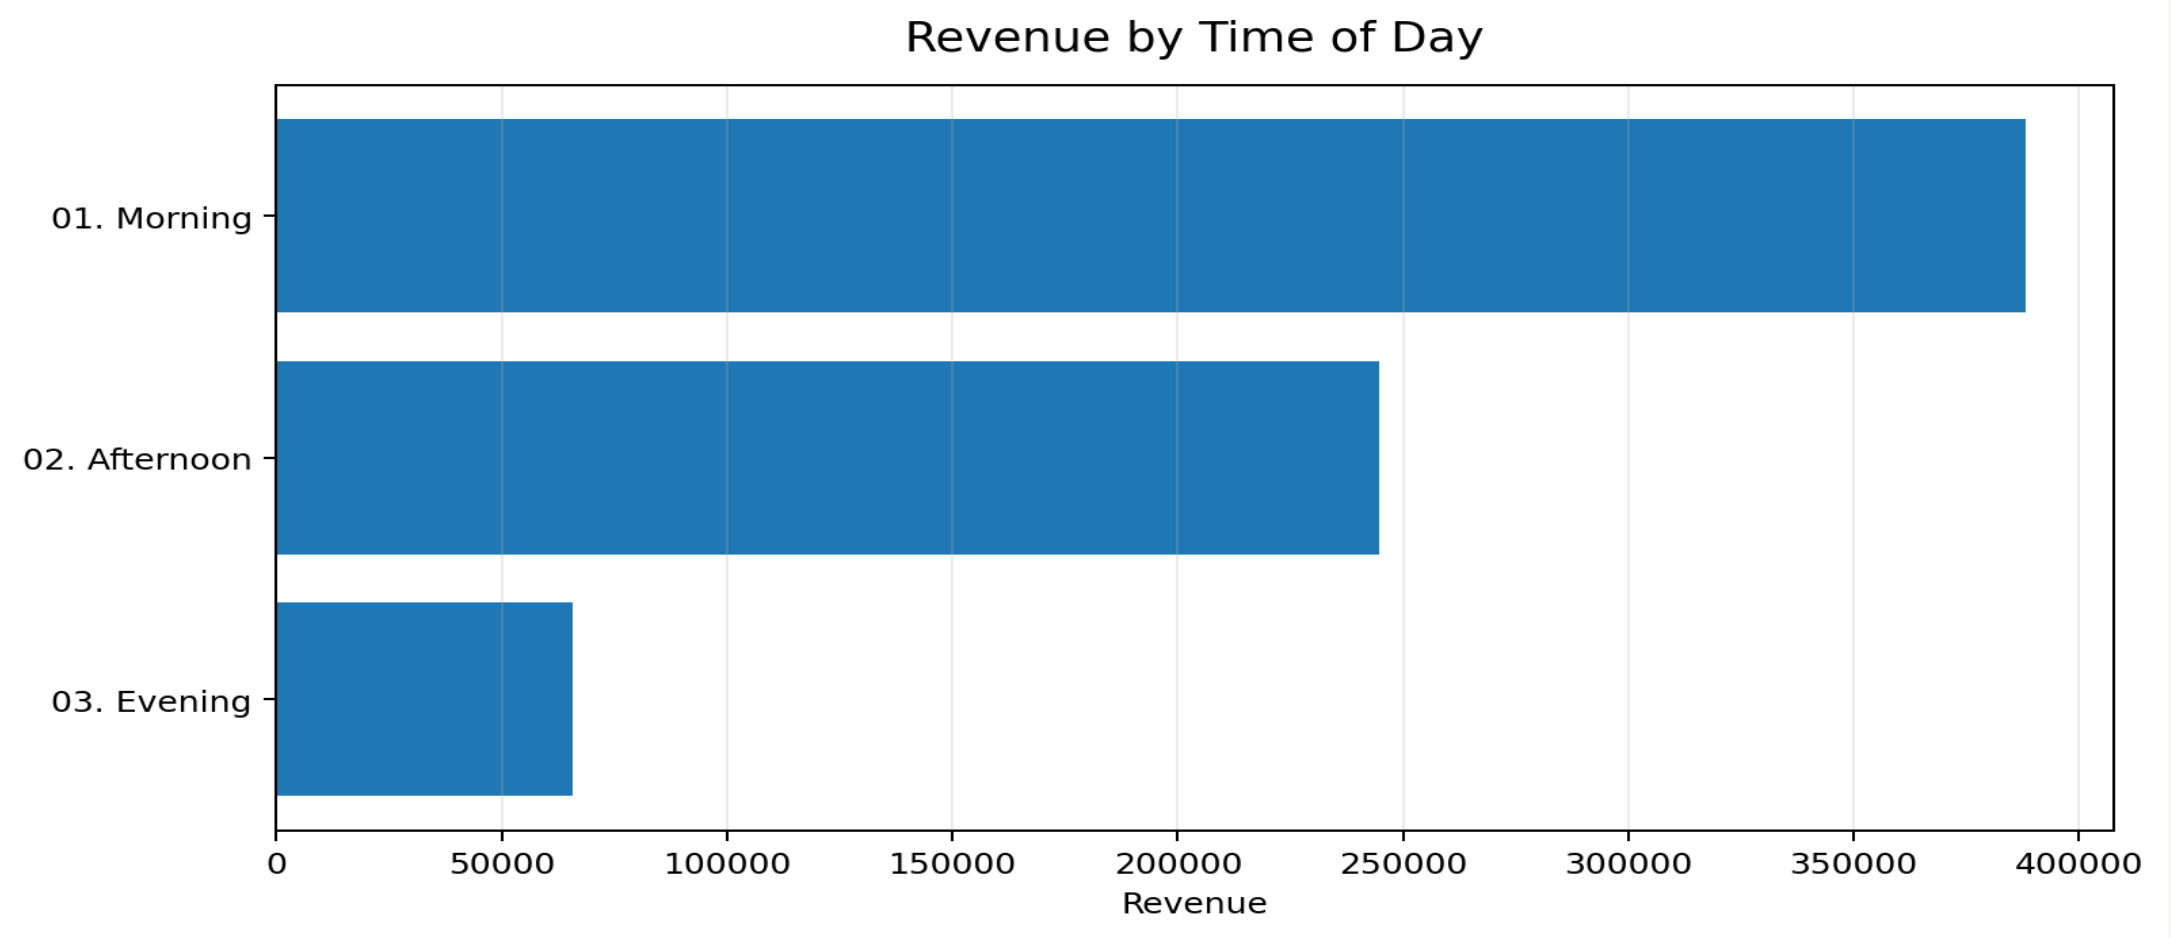

Compare location performance to identify strong performers and investigate gaps.

Hell's Kitchen is the top location by recorded revenue, representing approximately 33.8% of total revenue.

When Revenue Is Generated

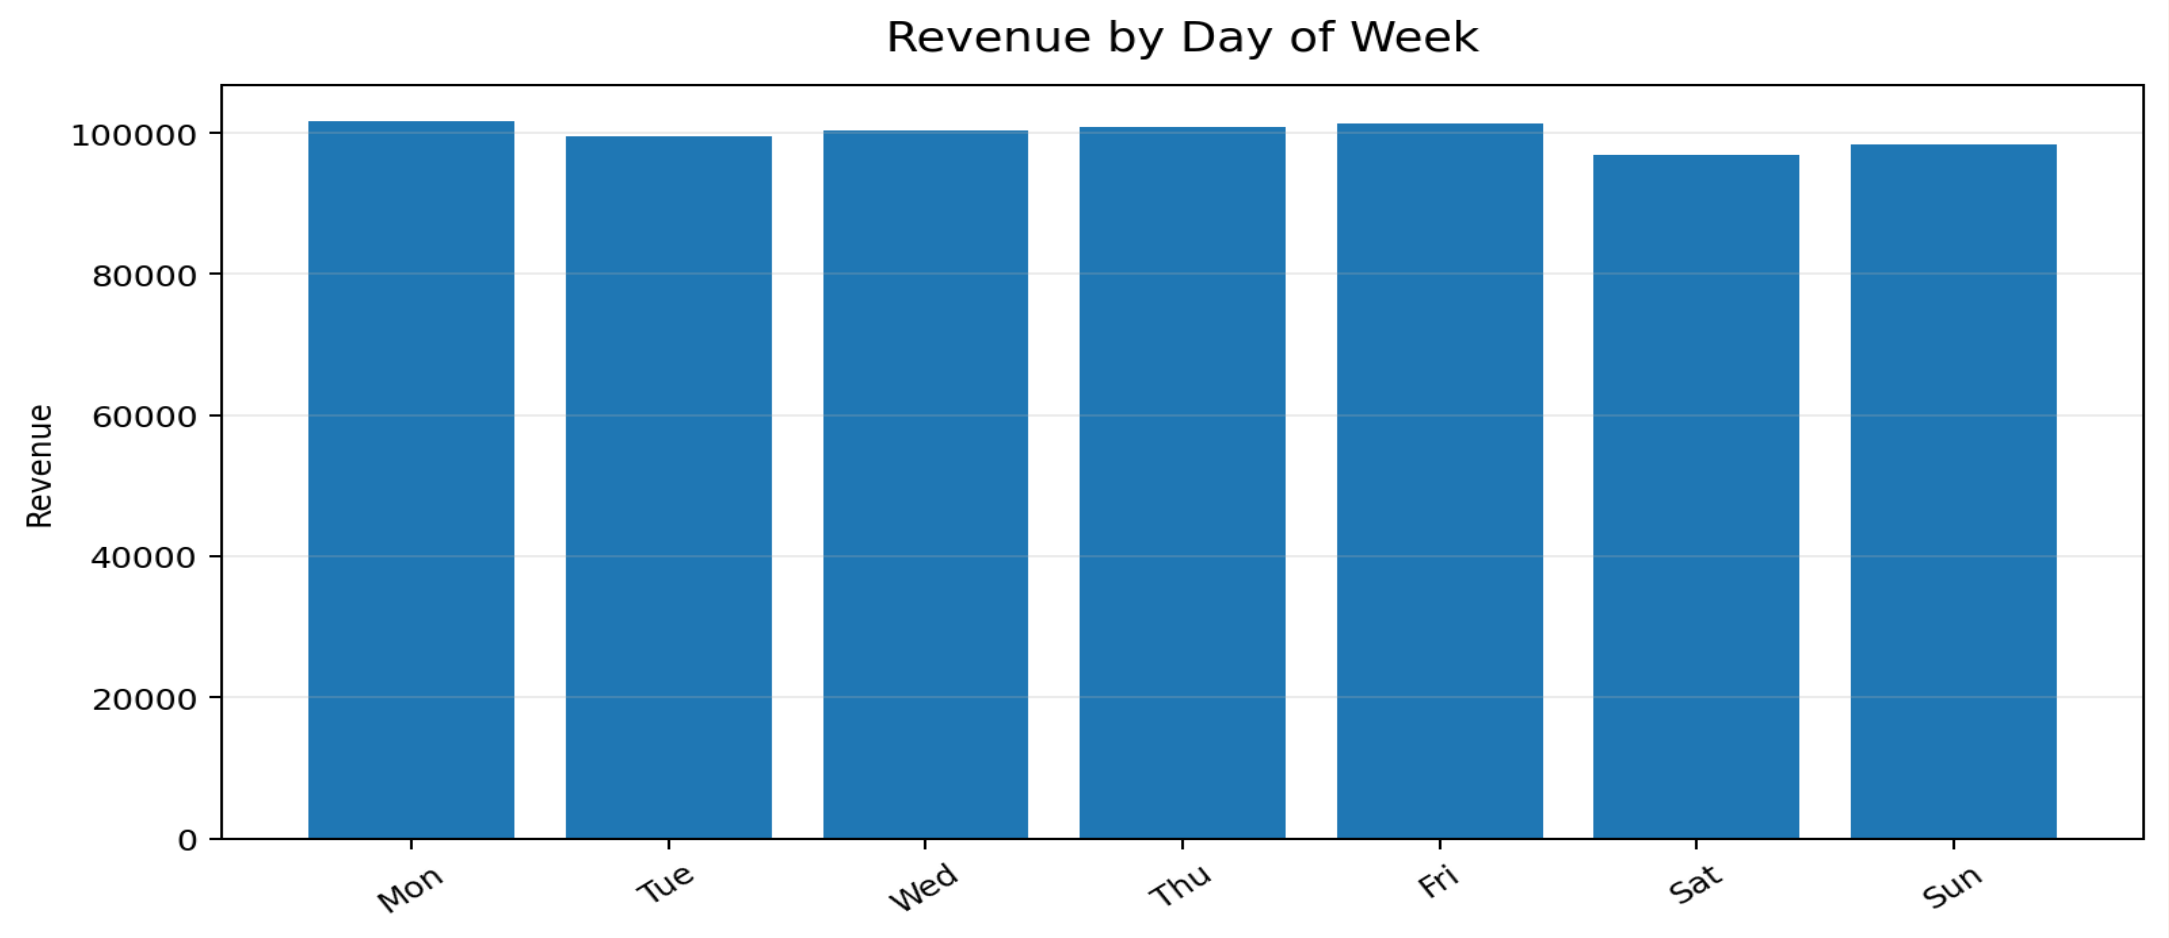

Revenue by the dataset’s time-of-day classifications.

Use peak periods to plan staffing, preparation and replenishment; confirm patterns against transaction counts.

Revenue by Day of Week

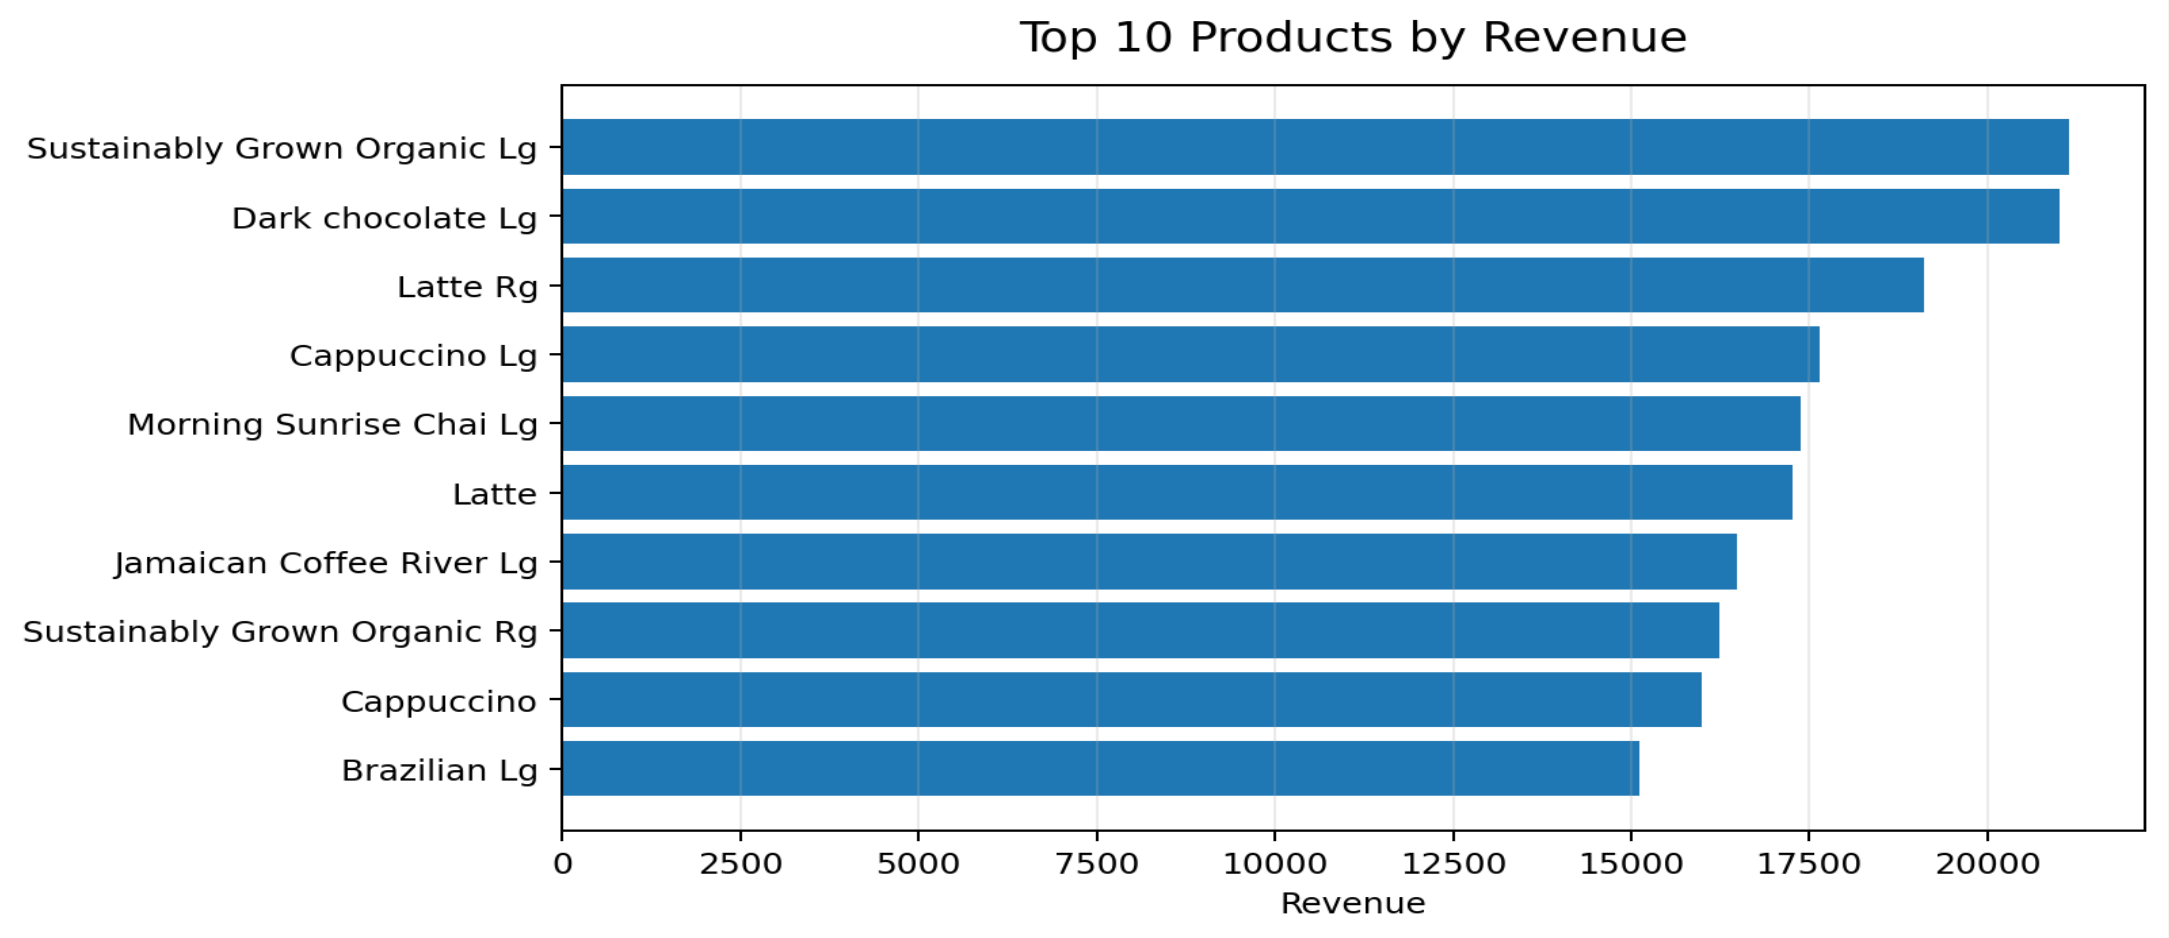

Understand differences across weekdays and weekends.

Highest revenue day: Mon. Lowest revenue day: Sat. Validate whether opening hours or trading conditions differ.

Top Products by Revenue

The ten highest-revenue product details in the dataset.

Top product by revenue: Sustainably Grown Organic Lg. Consider availability, placement and attach-rate opportunities.

Recommended Actions

Practical next steps based on the patterns visible in the data

Protect availability of the highest-revenue products and categories; monitor stock-outs during busy periods.

Compare store performance using revenue, units sold and sales counts together—not revenue alone.

Align staffing and preparation with the strongest time-of-day and day-of-week periods.

Investigate weaker months and locations before making changes; check promotions, operating hours and local conditions.

In the dashboard, add filters for date, store, product category, product type and time classification.

Suggested Dashboard Metrics

Keep the presentation findings easy to monitor in Databricks

Headline KPIs: total revenue, units sold, recorded sales and average revenue per sale.

Trend views: monthly revenue and day-of-week performance.

Mix views: revenue by product category, product type and product detail.

Operations views: revenue by store and time-of-day classification.

Interactive filters: transaction date, store location, category, product type and weekday/weekend.

Definition note: average revenue per sale is calculated as total revenue divided by the sum of the dataset's number_of_sales field.

THANK YOU

Bright Coffee Shop

Turn transaction data into better decisions about products, locations and trading periods.
